NNAP 2014 dataset audit measures

1) **Do all babies of less than or equal to 29 weeks gestation have their temperature taken within an hour after birth?**

2) **Are all mothers who deliver babies between 24^{+0} and 34^{+6} weeks gestation given any dose of antenatal steroids?**

3) **Are all babies with a gestational age at birth <32^{+0} weeks or <1501g at birth undergoing first Retinopathy of Prematurity (ROP) screening in accordance with the current national guideline recommendations?**

4) **What proportion of babies of <33^{+0} weeks gestation at birth are receiving any of their mother's milk when discharged from a neonatal unit?**

5) **Is there a documented consultation with parents by a senior member of the neonatal team within 24 hours of admission?**

6) **Are all babies accessing neonatal services treated in their own network (except where clinical reasons dictate)?**

7) **Are rates of normal survival at two years comparable in similar babies from similar neonatal units? (in 2014 we are auditing babies of <30 gestation at birth)**

8) **What percentage of babies admitted to a neonatal unit have:**
   - **a) one or more episodes of a pure growth of a pathogen from blood**
   - **b) one or more episodes of a pure growth of a pathogen from CSF**
   - **c) either a pure growth of a skin commensal or a mixed growth with >3 clinical signs at the time of blood sampling**

9) **What percentage of babies of more than or equal to 35 weeks gestation have an encephalopathy within the first three calendar days of birth?**

10) **How many blood stream infections are there on a NNU per 1000 days of central line[b] care?**

- [a] The growth of a recognised pathogen in pure culture, or in the case of a mixed growth, or growth of skin commensal, the added requirement for 3 or more of 10 predefined clinical signs
- [b] central line = UAC, UVC, percutaneous long line or surgically inserted long line

NNAP 2014 dataset audit Outlier measures

1. What proportion of babies with a gestation at birth of <29 weeks had both their temperature recorded within an hour of birth and a temperature value recorded as being between 36.5^{0}C to 37.5^{0}C?

2. What proportion of babies of <33^{+0} weeks gestation at birth are receiving any of their mother's milk when discharged from a neonatal unit?

3. Are all babies with a gestational age at birth <32^{+0} weeks or <1501g at birth undergoing first Retinopathy of Prematurity (ROP) screening in accordance with the current national guideline recommendations?

4. Is there a documented consultation with parents by a senior member of the neonatal team within 24 hours of admission?
