16:45	Close	

This annual event highlights developments in Child Protection. Specially developed for a Scottish audience, this 1-day course will give delegates updates into particular child protection areas and will address common challenges faced by general paediatricians when concerns arise about risk of harm to children and young people.

Learning objectives:

- Become aware of developments and updated Child Protection guidelines.
- Understand the role of general paediatricians relating to child protection and what to do about concerns about children including how and when to share information and how to escalate concerns when the response is not appropriate.
- Better understand the role of paediatricians when working with foster carers.
- Gain a better understanding of the processes and legislation for looked-after children.
- Understanding the impact of parents and carers on the mental and physical health on the wellbeing of children.
- Develop a better understanding of perplexing presentations.

This event is suitable for Child Protection level 3 competencies. CPD points have been applied for.
