

# National Paediatric Diabetes Audit (NPDA) Core Dataset

Revised dataset to be collected from  
1<sup>st</sup> April 2026

Guidance updated April 2026

No change to data item from 2021+ dataset document.

Data item/guidance changed from 2021+ dataset document.

New item for 2026/27 onwards.

# Introduction

This document contains details of the core NPDA dataset to be collected for visits/appointments that take place from the 1<sup>st</sup> April 2026, and replaces the dataset in use since the 2021/22 audit year. The majority of data items remain unchanged but there are substantial changes: there are ten new data items, eight modified items, and one item has been removed (HbA1c format: % or mmol/mol). Most notably, the treatment regimen item has been split up for clarity.

This new dataset is accompanied by an updated CSV template for those units submitting via bulk upload. The previous CSV template will no longer be accepted after 31<sup>st</sup> March 2026. If relevant, please work with your systems providers to update your data export format in time for the 2026/27 audit year. The NPDA will work with HiCom to facilitate this for Twinkle and Diamond users and WISDM for teams in Wales.

Items are drawn from the most recent National Institute of Clinical Excellence (NICE) guidance on the management of children and young people with diabetes ([NG18](#)). Other items also cover Best Practice Tariff ([BPT](#)) requirements. Although the Best Practice Tariff does not apply to Welsh Paediatric Diabetes Units (PDUs), its requirements are considered to represent good practice in Wales and form part of Quality Assurance standards.

The dataset is split into seven sections:

- |                                  |                                             |
|----------------------------------|---------------------------------------------|
| 1. Patient details/information   | 5. Annual review - psychology               |
| 2. Routine measurements          | 6. Annual review - dietetics                |
| 3. Treatment and monitoring      | 7. Hospital admissions and In-patient entry |
| 4. Annual review - health checks |                                             |

Permitted values are provided for every data item listed, along with a justification/reference for inclusion of the item within the dataset and guidance notes in some cases.

Following the COVID-19 pandemic, some appointments may still take place virtually (via phone/video). Items such as patient height, weight and blood pressure require an in-person clinic visit to be captured reliably, so we request that only hospital validated data is submitted to the NPDA. Calculated HbA1c from downloads should also only be used for clinical management locally and not submitted to the audit as they will not be IFCC assured. For the remainder of items, providing the care process or check has been performed via a video or phone appointment to a standard that your team considers to be commensurate with in-person delivery, please continue to enter this information into the audit. Please review the guidance notes against each item for more information.

If you have any queries about the dataset please do not hesitate to contact the NPDA.

## Annual Review - Psychology

|    | Data item name                                                                                                                            | Permitted Values                                                      | Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Justification / Standard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----|-------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 47 | Date of Annual Psychological Screening Assessment                                                                                         | Format: DD/MM/YYYY                                                    | <p>Enter a date that a formal assessment has taken place for the 'need of additional psychological support' (<b>beyond that which might be routinely provided within clinic</b>). An assumption will be made that no assessment has taken place if no date entered.</p> <p>Only include assessments performed by a member of the paediatric diabetes MDT. This can be performed remotely.</p> <p><b>N.B this is a process measure</b>, establishing whether the patient has been screened annually for psychological distress.</p> | <p>Regular assessment of a broad range of psychological and behavioural problems in children and adults with type 1 diabetes is recommended.</p> <p><a href="#">NG18</a>: 1.2.103 and 1.3.64 Diabetes teams should be aware that children and young people with type 1/type 2 diabetes have a greater risk of emotional and behavioural difficulties. [2004, amended 2015]</p> <p><a href="#">NG18</a>: 1.2.104 and 1.3.65 Offer children and young people with type 1/type 2 diabetes and their family members or carers (as appropriate) emotional support after diagnosis, which should be tailored to their emotional, social, cultural and age-dependent needs. [2004]</p> <p><a href="#">NG18</a>: 1.2.105 Assess the emotional and psychological wellbeing of young people with type 1 diabetes who present with frequent episodes of diabetic ketoacidosis (DKA). [2004, amended 2015]</p> |
| 48 | Following annual psychological screening, was the patient assessed as requiring additional psychological support outside of routine care? | <p><b>1</b> = Yes</p> <p><b>2</b> = No</p> <p><b>99</b> = Unknown</p> | <p>Complete if annual psychological screening was performed at visit.</p> <p>Applicable if the patient was assessed as needing additional psychological support outside of routine clinical care provided by your PDU. i.e. was the patient assessed as experiencing a level of psychological distress necessitating additional support (regardless of whether or not the patient has yet received support, and regardless of whether this distress is primarily related to their diabetes).</p>                                   | <p><a href="#">NG18</a>: 1.2.106 and 1.3.67 Be aware that a lack of adequate psychosocial support has a negative effect on various outcomes, including blood glucose control in children and young people with type 1/type 2 diabetes, and that it can also reduce their self-esteem. [2004, amended 2015]</p> <p><a href="#">NG18</a>: 1.2.107 and 1.3.68 Offer children and young people with type 1/type 2 diabetes and their family members or carers (as appropriate) timely and ongoing access to mental health professionals with an understanding of diabetes because they may experience psychological problems (such as anxiety, depression, behavioural and conduct disorders and family conflict) or psychosocial difficulties that can impact on the management of diabetes and wellbeing. [2004, amended 2015]</p>                                                                   |
