

INFORMATION FOR TRAINEE

This is a 8 minute scenario. Check the 'Task' below so you know how this scenario will be run. You will have up to 4 minutes before the start of the assessment to read this information and prepare yourself. You may make notes on the paper provided.

You should

- *Enter the assessment room when the bell sounds*
- *Take this instruction sheet with you and any notes you have prepared*
- *Note that there will be a warning when you have approximately 2-minutes left*
- *Return the instruction sheet outside the room when you leave*

Context	You are a newly appointed consultant
Task	The assessor will discuss this scenario with you.
Information for trainee	The ward manager met you as you arrived this morning concerned about the management of a patient admitted overnight with Diabetic Keto-Acidosis (DKA) when you were on call. This is the first time you have heard about this patient who is a 13 year old girl with poorly controlled Type 1 diabetes. Her pH at presentation was 7.15. You are told that the ST4 trainee ignored the unit protocol which adheres to the national guideline for the management of DKA despite being shown it by the nursing staff. The doctor gave 3 boluses of 20mls/kg normal saline and then wrote up fluid replacement taking no account of the resuscitation boluses. She is receiving one to one nursing on the ward and is currently stable.
