**Overview**

This course will help you to recognise and manage heart problems in neonatal patients. Focusing on conditions such as critical neonatal heart disease and persistent pulmonary hypertension of the newborn, this course covers both medical and surgical options for treatment and management and tips on how to effectively undertake ECG’s and echo cardiogram examinations on neonatal patients.

**Course aim**
This one-day course will increase your skills, knowledge and confidence in the diagnosis and management of critical congenital heart defects in neonatal patients.

By the end of this course, you will be able to:

- Describe the clinical features and diagnosis of critical congenital heart disease in the neonate
- Discuss the medical and surgical management, including early diagnosis and acute resuscitation, of neonates with heart disease
- Revise diagnosis and management of PPHN (persistent pulmonary hypertension of the newborn)
- Apply top tips to interpret neonatal ECG (electrocardiogram)
- Discuss functional echo and neonatal PDA (patent ductus arteriosus) assessment

Target audience

- Newly qualified neonatal and paediatric consultants,
- Neonatal trainees
- Senior paediatric trainees
- SAS doctors and cardiology fellows
- Advanced nurse practitioners

Fantastic course, thank you. Pitched well to various training levels and fascinating to know more about surgical side of things from such an expert. Thank you!
